exo-alpha-sialidase (EC 3.2.1.18) - Actinomyces viscosus
C;Species: Actinomyces viscosus
C;Species: Actinomyces viscosus
C;Date: 22-Nov-1993 #sequence_revision 01-Dec-1995 #text_change 22-Oct-1999
C;Accession: $20590
R;Henningsen, M.; Roggentin, P.; Schauer, R.
Biol. Chem. Hoppe-Seyler 372, 1065-1072, 1991
A;Title: Cloning, sequencing and expression of the sialidase gene from Actinomyces vi
A;Reference number: $20590; MUID:92162190
A;Accession: $20590
A;Status: preliminary
A;Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   333

DNA-binding protein 5E5 - rat
C; Species: Rattus norvegicus (Norway rat)
C; Species: Rattus norvegicus (Norway rat)
C; Date: 27-aug-1995 #sequence_revision 19-oct-1995 #text_change 20-Jun-2000
C; Accession: JC4163; PC4040
R; Suzuki, E.; Kojima, N.; Yoshimura, K.; Uyemura, K.; Obata, K.; Akagawa, K.
J. Biochem. 118, 122-128, 1995
A; Title: Cloning and sequence analysis of cDNA for a possible DNA-binding protein 5E!
A; Reference number: JC4163; MUID:96015159
A; Accession: JC4163
                                                                                                                                                                                                                                                         A; Wolecule type: mRNA
A; Residues: 1-825 <SU2>
A; Cossidues: brain
A; Accession: PC4040
A; Wolecule type: protein
A; Wolecule type: protein
A; Wolecule type: protein
A; Residues: 230-455 <SU2>
C; Comment: This protein has an abundance of arginine, a glycine-rich region and a protein protein has an abundance of arginine, a glycine-rich region and a protein protein has an abundance of arginine, a glycine-rich region and a protein reve; phosphoprotein
C; Superfamily: collagen alpha 1(1) chain; fibrillar collagen carboxyl-terminal homological proveds in erve; phosphoprotein
F; 436-443/Region: nuclear location signal
F; 722-731/Region: proline cluster
F; 62,258,345,360,404,413,570,613,635,752,820/Binding site: phosphate (Ser) (covalent)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               507
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  73
```

ECTOKINASE

```
The first and 100 kba from Hela cells.

If and 100 kba from Hela cells.

If Blochem. J. 290:267-272(1993).

If RACTS. FORMS A COMPLEX WITH THE POLYPYRIMIDINE TRACT-BINDING TRACTS.

IF RACTS. FORMS A COMPLEX WITH THE POLYPYRIMIDINE TRACT-BINDING POTENT (PTB). SEEMS TO ALSO BIND DRA.

If SUBUNIT: HETEROTETRAMEN OF TWO 52 kDA AND TWO 100 kDA SUBUNITS.

II SUBCELLULAR LOCATION: NUClear.

II ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; A LONG FORM (SHOWN HERS) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

II STMILARITY: CONTAINS 2 RNA RECGGNITION MOTIFS (RRM).

II STMILARITY: CONTAINS 2 RNA RECGGNITION MOTIFS (RRM).

II CAUTION: WAS ORIGINALLY (RRE. 2) THOUGHT TO BE MYOBLAST CELL SURFACE ANTIGEN 24.1D5 AND A POSSIBLE MEMBRANE-BOUND PROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TISSUE=Fetal skeletal muscle;

-1- FUNCTION: BINDS TO GTP-BOUND FORM OF RHO AND TO PROFILIN. ACTS IN A RHO-DEPENDENT MANNER TO RECRUIT PROFILIN TO THE MEMBRANE, WHERE IT PROMOTES ACTIN POLYMERIZATION. IT IS REQUIRED FOR CYTOKINESIS, STRESS FIBER FORMATION. AND TRANSCRIPTIONAL ACTIVATION OF THE SERUM RESPONSE FACTOR. DFR PROTEINS COUPLE RHO AND SRC TYROSINE KINASE DURING SIGNALING AND THE REGULATION OF ACTIN DYNAMICS (BY SIMILARITY). IN HEARING IT MAY FLAY A ROLE IN THE REGULATION OF ACTIN POLYMERIZATION IN HAIR CELLS.
-1- TISSUE SPECIFICITY: EXPRESSED IN BRAIN, HEART, PLACENTA, LUNG, KIDNEY, PANNERS, LIVER, SKELETAL MUSCLE, AND COCHLEA.
-1- DOMAIN: DRFS ARE REGULATED BY INTRAMOLECULAR GBD-DAD BINDING WHERE RHO GTP ACTIVATES
